## Live-In Kitchen

WITH FULL WORK schedules, these Phoenix, Arizona, homeowners desired a live-in kitchen where they could easily gather and prepare meals to avoid relying on take out. They wanted to make weekend entertaining a snap to prepare and enjoy sharing with family and friends. To complete the much-needed remodel, they called on the design-build team of Cook Remodeling & Custom Construction.

Now a custom island provides ample prep space, a breakfast bar for casual dining, a work spot for their college son and his laptop, and a spread to serve guests buffet style. Above, a pot rack with lighting keeps pans within reach. Frameless cabinetry maximizes storage and features a curved cabinet end for housing spices and such. A corner desk works overtime as a household planning post, message center, and computer station. The new bay window supplies abundant natural light and views to the pool and water feature.

This eco-friendly couple added solar panels that supply 70 percent of their electrical needs, low-wattage lighting, and Energy Star appliances to cool and cook at a lower cost. With their greener setup, custom island, and smart space configuration, the homeowners are now loving their live-in kitchen. *Learn more about this company at [www.cookremodeling.com](http://www.cookremodeling.com).* «
